                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 뫄
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ş
                                                   CC for identifying expressed genes. (I) is useful in gene therapy techniques (II). (II) is useful in generating antibodies states involving CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as CC and supplement. (II) and its binding partners are useful in medical CC imaging of sites expressing (II). (I) and (II) are useful in medical CC imaging of sites expressing (II). (I) and (II) are useful in medical CC imaging of sites expressing (III). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. CC The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations CC consistency of the mapping, identification of mutations CC and to produce other types of data and products dependent on DNA and CC and to produce other types of data and products dependent on DNA and CC and a sequences. ABG00010-ABG30377 represent novel human CC diagnostic amino acid sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed constitution of a product of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ABG10230
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RESULT 8
                                                                                                                                                                                                                                                                                                                                                                   The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polypeptide (II) sequences, olipomers, oligomers, and for chromosome polynerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressions of the production of the polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity -

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving
                                                                                                                                                                                                                                                                                                 New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutation responsible for genetic disorders or other traits and to assess beddingster.

(II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess blodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human
                                                                                                                                                                                   Homo

                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from prosophila. The invent; useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated nucleic acid genes from Drosophila and interactions -

                                                                                                                                                              The invention is a constitution of the encoded polypeptides (AAM38642-AAM42213) with noorrupic, the encoded polypeptides (AAM38642-AAM42213) with noorrupic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assaws for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                {\tt C.N.S} disorders. Note: The sequence data for this patent did not form part of the printed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 19-JUL-2000;

      The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous

CE Expression vectors comprising the PARG nucleic acid can be used to CC transform host cells for the recombinant production of the protein. The CC PARG polypeptides or complexes comprising PTPLI polypeptide having CC phosphatase activity (AAW7599) and PARG polypeptide can be administered CC to mammalian cells to reduce Rho family signal transduction. The PARG CC polypeptides can be administered to cancer cells to reduce proliferation (which is increased by Rho family signal transduction). Alternatively, CC dominant-negative variants of the polypeptide (e.g. with a GAP domain CC inactivated) can be used to increase Rho family signal transduction.

CC PARG was determined to have GAP activity in vitro, which was strongest on CC Rho but also detected on Ras-like GTPases, Rac and Cdc42, and bound CC PARG ficially to the fourth PDZ domain (PDZ4) of known intracellular CC protein tyrosine phosphatase PTPL1, involved in signal transduction. CC PARG golypeptides and polynucleotides are useful to produce modulators of CC modulate mast cell secretion. The polypeptides are also useful for conduction or conduction pharmacological agents useful for disease diagnosis and

                Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printe and is derived by analysis of the total score distribution.

R;Agnel, M.; Roder, L.; Vola, C.; Griffin-Shea, R.
Mol. Cell. Biol. 12, 5111-5122, 1992
A;Title: A Drosophila rotund transcript expressed during A;Reference number: A48122; MUID:93024458; PMID:1406685
A;Accession: A48122
A; Note: sequence C; Genetics:
                           A; Molecule type: nucleic acid
A; Residues: 1-384 <AGN>
                                                                                                                                                           GTPase-activating protein Rac homolog, splice form C;Species: Drosophila melanogaster C;Date: 21-Jan-1994 #sequence_revision 18-Nov-1994
                                                                                                                                                                                                        RESULT

                                                                                                                                                                                                                                                                                                                                                                                                                                                        FUNCTION: MYOSINS ARE ACTIN-BASED MOTOR MOLECULES WITH ATPASE ACTIVITY. UNCONVENTIONAL MYOSINS SERVE IN INTRACELLULAR MOVEMENTS.

MAY BE INVOLVED IN THE REMODELING OF THE ACTIN CYTOSKELETON. BINDS ACTIN WITH HIGH AFFINITY BOTH IN THE ABSENCE AND PRESENCE OF ATP AND ITS MECHANOCHEMICAL ACTIVITY IS INHIBITED BY CALCIUM IONS.

ALSO ACTS AS A GTPASE ACTIVATING PROTEIN ON RHO.

ALSO ACTS AS A GTPASE ACTIVATING PROTEIN ON CHO.

SUBCELLULAR LOCATION: IN UNDIFFERENTIATED CELLS COLOCALIZES WITH F-ACTIN IN THE CELL PERIPHERY WHILE IN DIFFERENTIATED CELLS ITS LOCALIZION IS CYTOPLASMIC WITH THE HIGHEST LEVELS IN THE PERINUCLEAR REGION (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                        BINDING DOMAIN.
SIMILARITY: CONTAINS 1 RHO-GAP DOMAIN.
SIMILARITY: CONTAINS 1 MYOSIN-LIKE GLOSIMILARITY: CONTAINS 4 IQ DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     307
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              194

ACTIVITY. UNCONVENTIONAL MYOSINS SERVE IN INTRACELLULAR MOVEMENTS.

MAY BE INVOLVED IN THE REMODELING OF THE ACTIN CYTOSKELETON. BINDS

ACTIN WITH HIGH AFFINITY BOTH IN THE ABSENCE AND PRESENCE OF ATP

AND ITS MECHANOCHEMICAL ACTIVITY IS INHIBITED BY CALCIUM IONS.

ALSO ACTS AS A GTPASE ACTIVATING PROTEIN ON RHO.

-I- SUBCELLULAR LOCATION: IN UNDIFFERENTIATED CELLS COLOCALIZES WITH

F-ACTIN IN THE CELL PERIPHERY WHILE IN DIFFERENTIATED CELLS ITS

LOCALIZTION IS CYTOPLASMIC WITH THE HIGHEST LEVELS IN THE

PERINUCLEAR REGION (BY SIMILIARTY).

-I- ALTERNATIVE PRODUCTS: 3 ISOFORMS; 1 (SHOWN HERE), 2/Q AND 3/C ARE

PRODUCED BY ALTERNATIVE SPLICING.

-I- TISSUE SPECIFICITY: EXPRESSED IN THE BRAIN, HEART, MUSCLE AND
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Mus musculus (Mouse).

RI SUDMITTED TO THE COLL SERVE IN THE ABSENCE WITH ATPASE CC -1- FUNCTION: MYOSINS ARE ACTIV-BASED MOTOR MOLECULES WITH ATPASE CC -1- FUNCTION: MYOSINS ARE ACTIV-BASED MOTOR MOLECULES WITH ATPASE CC ACTIVITY. UNCONVENTIONAL MYOSINS SERVE IN INTERACELLULAR MOVEMENTS. CC MAY BE INVOLVED IN THE REMODELING OF THE ACTIV CYTOSKELETON. BINDS CC ACTIN WITH HIGH AFFINITY BOTH IN THE ABSENCE AND PRESENCE OF ATPACE AND ITS MECHANOCHEMICAL ACTIVITY IS INHIBITED BY CALCIUM IONS. CC ALSO ACTS AS A GIPASE ACTIVATING PROTEIN ON RHO.

CC -1- SUBCELLULAR LOCATION: IN UNDIFFERENTIATED CELLS ITS CC FACTIN IN THE CELL PERIPHERY WHILE IN DIFFERENTIATED CELLS ITS CC FACTIN THE CELL PERIPHERY WHILE IN DIFFERENTIATED CELLS ITS CC PERINUCLEAR REGION.

CC -1- ALTERNATIVE PRODUCTS: 2 ISOFORMS; A LONG FORM (SHOWN HERE) AND A CC -1- TISSUE SPECIFICITY: EXPRESSED PREDOMINANTLY IN PERIPHERAL BLOOD INTEVNAL SELECTIVE INVESTED TO THE METATIVE SPECIFIC AND A TOWER SERVERSED PREDOMINANTLY IN PERIPHERAL BLOOD INTEVNAL SELECTIVE INVESTED TO THE METATIVE SPECIFIC STREETS AND A THEY MAY SELECTIVE SPECIFICITY. EXPRESSED PREDOMINANTLY IN PERIPHERAL BLOOD INTEVNAL SELECTIVE INVESTED SELECTIVE SPECIFICITY.

FUNCTION: GTPASE ACTIVATING PROTEIN FOR P21-RAC. INSUFFICIENT

EXPRESSION OF BETA-2 CHIMAERIN IS EXPECTED TO LEAD TO HIGHER RAC

ACTIVITY AND COULD THEREFORE PLAY A ROLE IN THE PROGRESSION FROM

LOW-GRADE TO HIGH-GRADE TUMORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    MEDLINE=95339337; PubMed=7614486;
